

Q. If I abstract 2023 cases now, will I have to go back and re-abstract after the metafile is uploaded??

A. No, however you will need to go back to abstract the new surgical fields and SSDI as applicable.

Q. If we have already abstracted 2023 cases, will the surgery codes automatically update?

A. The surgical codes will not automatically update. Users will need to manually enter these.

Q. Will the edits be run in v23 then?

A. The v23 layouts will not be implemented in CRStar until May 2023. Therefore, no v23 metafiles will be utilized until exports are performed with the v23 NAACCR layout.

Q. Can a global change be used to update surgical codes when the time comes?

A. Global changes are evaluated on a case-by-case basis. Please open a support portal request should you feel there is a need for a global change.

Q. If you accidentally code pilocytic with behavior 3, will you get an edit?

A. We will look into whether or not NAACCR has created an edit for this histology.
