

CRStar Insights

Exporting Cases to the State of California

The intent of this Insight is to demonstrate how to select and submit cases to the state of California. In addition to new case records, California requires the submission of modified records. Cases are selected via the Select a Population function using the State Report Flag field as criteria. New case records that are ready for transmit should have the State Report Flag set to "Y" by the abstractor upon completion. Modified records will have a State Report Flag of "C" (if the data modifications involve fields that trigger a correction record) or "F" (if the data modifications involve fields that trigger a Follow-Up record). The "C" and "F" flags are assigned automatically by CRStar based on California Cancer Reporting System Standards. Cases are exported using the Data Exports function. The state report flag is changed to a "T" after exporting the data.

To select new case records for transmit, create a population that selects all cases where the State Report Flag is coded to a "Y" as shown below.

Select a Population

Population Label:

Requested By: Request Date:

Hospitals: GENERAL HOSPITAL Include Duplicates of Shared Patients

Dx Date 1st Contact Date From: To:

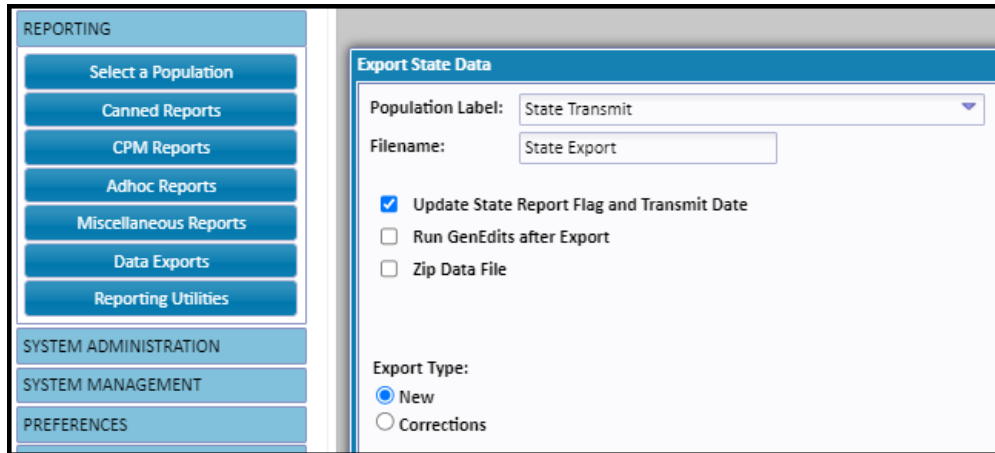

Abstract/Suspense Cases Abstract Cases Only Suspense Cases Only All Cases

Case Type Analytic Cases Only Complete Cases Only Incomplete Cases Only Non-Reportable State Flag

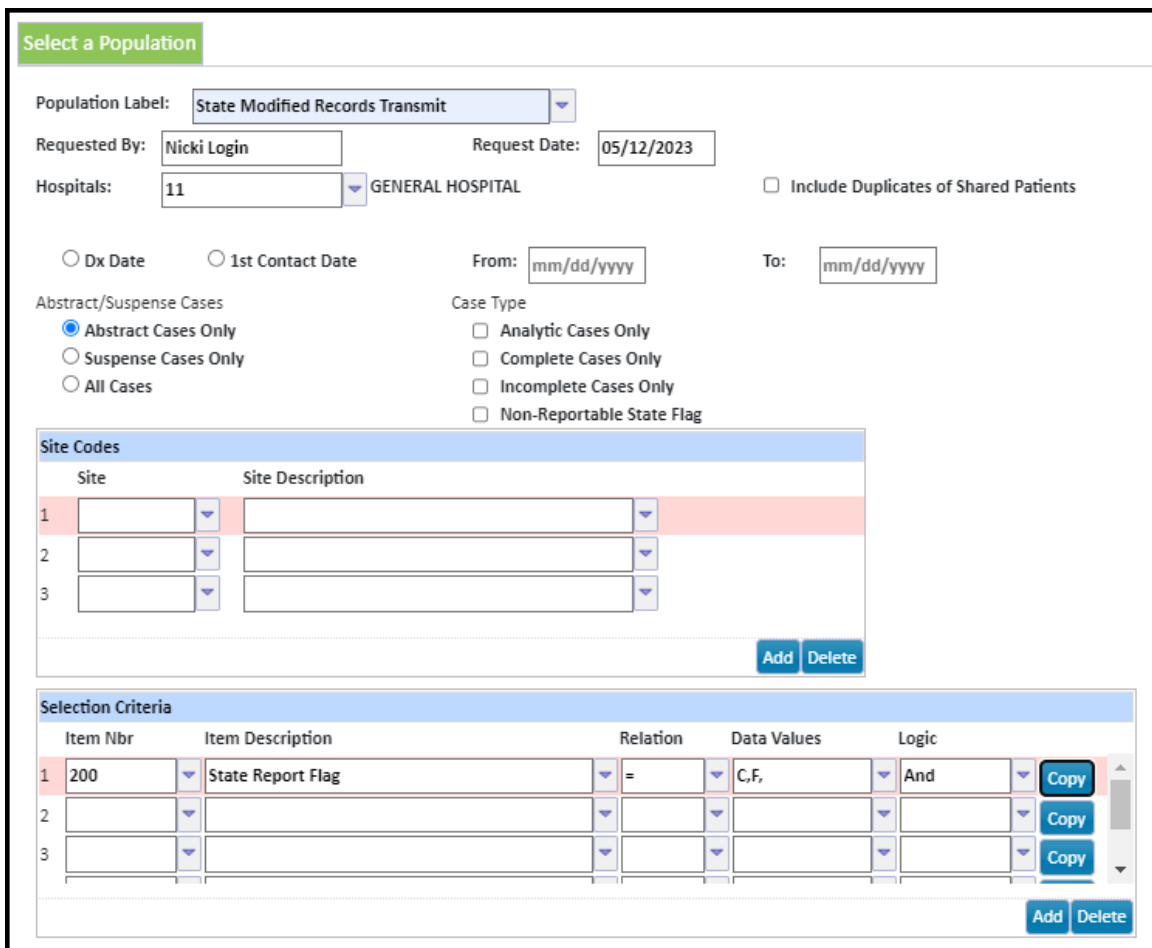

Site Codes	
Site	Site Description
1	<input type="text"/>
2	<input type="text"/>
3	<input type="text"/>

Selection Criteria					
Item Nbr	Item Description	Relation	Data Values	Logic	
1	200 State Report Flag	=	Y	And	<input type="button" value="Copy"/>
2	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="Copy"/>
3	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="button" value="Copy"/>

To export the data, click on Reporting > Data Exports > State export. Select your population label. The Filename will default to "State Export" and can be modified as needed. For Export Type, select "New" as shown below:

To select modified records for transmit, create a population that selects all cases where the State Report Flag is coded to a "C" or an "F" as shown below.

To export the data, click on Reporting > Data Exports > State export. Select your population label. The Filename will default to "State Export" and can be modified as needed. For Export Type, select "Corrections" as shown below:

The screenshot displays the 'Export State Data' interface. On the left, a navigation sidebar is visible with the following sections: REPORTING (containing Select a Population, Canned Reports, CPM Reports, Adhoc Reports, Miscellaneous Reports, Data Exports, and Reporting Utilities), SYSTEM ADMINISTRATION, SYSTEM MANAGEMENT, and PREFERENCES. The main content area is titled 'Export State Data' and contains the following fields and options:

- Population Label:** A dropdown menu currently showing 'State Modified Records Transmit'.
- Filename:** A text input field containing 'State Export'.
- Checkboxes:**
 - Update State Report Flag and Transmit Date
 - Run GenEdits after Export
 - Zip Data File
- Export Type:** Radio buttons for 'New' and 'Corrections', with 'Corrections' selected.
