## Enhancements & Corrections

January 16, 2024

### Corrections

- A correction was made to the surgery screen to default the proper B surgery code for Melanoma cases when there is no surgery provided
- Description on Radiation Treatment Modality code 14 has been corrected to Radioisotopes, Radium-223
- The days from Dx to Palliative Care column name has been corrected in Global DIR and all other related areas which will allow it to function properly in reports
- Breslow's Tumor Thickness SSDI field data validation has been corrected and allows the alpha-numeric range values properly
- There was a correction to the misspelling of Menu Items on the Security screen
- The Adhoc List pop has been corrected to allow the process of larger files, delimited files and properly displays all items in Excel when one item number is listed
- Select a Pop has additional hover over information in the “unique primary” options and the correction has been made to properly include the defaulted “Abstract Only” criteria for a new pop label
- The description text is returned at the bottom left corner of the Abstract screens
- A correction was made to the change password link to work without an error and to automatically return the user back to the login screen once completed
